Gödel's incompleteness theorems are two theorems of mathematical logic that demonstrate the inherent limitations of every formal axiomatic system capable of modelling basic arithmetic. These results, published by Kurt Gödel in 1931, are important both in mathematical logic and in the philosophy of mathematics. The theorems are widely, but not universally, interpreted as showing that Hilbert's ...

Under review as a conference paper at ICLR 2017 If $P(r(x)) > P(g(x))$, then x is a point with higher probability of coming from the data than being a generated sample. This is the core of the phenomenon commonly described as "mode dropping": when there are large regions with high values of P

5 failures. Following Weimer and Vining (2005, 2006) we might distinguish "passive government failure," where government inaction results in Pareto inferior outcomes, from "active government failure," where government action results in outcomes worse than if government had done nothing.
