Spin is likely the primordial self-referential process driving quantum mechanics, spacetime dynamics and [immanent] consciousness, Huping Hu, Ph.D., J.D.

### **Quantum Brain, Quantum Mind & Quantum Consciousness**

The quantum mind or quantum consciousness group of hypotheses propose that classical mechanics cannot explain consciousness. It posits that quantum mechanical phenomena, such as quantum entanglement and superposition, may play an important part in the brain's function and could contribute to form the basis of an explanation of consciousness.. Hypotheses have been proposed about ways for quantum ...

### **Dynamics - Wikipedia**

The nature of consciousness, the mechanism by which it occurs in the brain, and its ultimate place in the universe are unknown. We proposed in the mid 1990's that consciousness depends on biologically "orchestrated" coherent quantum processes in collections of microtubules within brain neurons, that these quantum processes correlate with, and regulate, neuronal synaptic and membrane ...

Time-driven quantum systems are important in many different fields of physics like cold atoms, solid state, optics, etc. Many of their properties are encoded in the time evolution operator which is calculated by using a time-ordered product of actions.

The quantum wave function is moving in hidden extradimensions of space-time with speed, which exceeds the speed of light. There are the phase waves, of which we understand the EM variety.
